

Data Discovery and Classification:

- Connected to [AWS](#), [Azure](#), [M365](#) and [Snowflake](#)
- Discovered [842](#) datastores & scanned **586**
- Discovered **1.2T** records into [99](#) data classes
 - **Financial:** [Credit Card Number](#), [IBAN](#), [Revenue](#), [Card Verification Code](#)
 - **PII:** [US SSN](#), [Taxpayer ID](#), [Passport Number](#), [Aadhaar Number](#), [Drivers License](#)
 - **Health:** [Patient ID](#), [Medical Condition](#)
 - **Business & IP:** [Company Name](#), [Company Address](#), [Employer ID Number](#)
- [33% \(33 out of 99\)](#) of the data classes in Ahead / Capgroup sandbox was classified using ML models.
 - [Transaction ID](#), [Payment ID](#), [Credit Card Statement](#), [Order ID](#), [Bank Statement](#), [Resume](#), [W2](#), [NDA](#), [Client ID](#)
- **Context**
 - [Invalid Credit Card Numbers](#)
 - [Invalid IBAN Numbers](#)
 - [Synthetic Data](#)
- **Data Subject Residency**
 - [India](#)
 - [California](#)
 - [Canada](#)

In Snowflake we [Classified using without column names](#)

Actionable Insights into risk

- [Credit Card Numbers in Plain Text](#)
- [34 ghost / stale data](#)
- [Sensitive data is unencrypted in Oracle](#)
- [EC2 hosting a Database containing sensitive data](#)
- [114 stale identities with access to sensitive records](#)
- [329 Power Users with some with access to restricted and confidential data](#)

M365 Specific findings:

1. [Identified sensitive records in ghost drives](#)
2. [117 Files Shared Publicly](#)
3. [216 files shared across the organization](#)
4. [Files shared with personal email](#)
5. [M365 Ghost Drives contain sensitive information](#)
